### Portal Applications and Support Sites

- Current applications include (new in bold):
  - All current applications are to date by version and patched for security. We had a few spam attacks on meet.mpla.us, solved by two plug in modules.
  - Dan and I have already discussed the upcoming election. We will run a test run with Board members to troubleshoot the process. We learned that only 500(max) emails can be sent in an hour. I will send out voting emails in lots of 450 emails/hr. I will do this for each of the three rounds of emailing.
  
- Future applications
  - For the upcoming MPLA/OLA Conference, I would like to run an online conference using meet.mpla.us. We could invite presentations that were not selected to present by creating profiles, uploading presentations and creating a group for discussion.
  
- Site Maintenance
  - Weekly back-ups created every Friday and stored on local hard drive.
    - I am planning on deleting old backups.
  - Security vs Spam- Still had trouble with meet.mpla.us but addition of second module stopped spam.
